ABSTRACT

The final project for the student of Diploma in Interior Design is a manifestation towards the powerful tools in the design process that requires both intellectual and creative rigor. Focus of this proposed new interior design of Lestari Kids Club for Laman Lestari Sdn. Bhd at Lot 9, Jalan Panglima Bukit Gantang Wahab, 30000 Ipoh, Perak. Will give students a foundation of understanding by broadening their knowledge of spatial design through the study of the plan and plan language. The plan is what architects, interior designers and landscape designers use to move people through space, to organize space, and to place objects in space. Client is the main priority element when we want to design something, we must know about client background and what kind of design they asked for, that is important because we need to relate between space and concept at the next stage. Then we also must look at which area our project will be propose, student must study about the site analysis and also the building analysis, unforgettable about the potential and weakness of that site. After get approval towards the site proposal, student must study on the space and gain much more ideas to involve a concept onto the space. At the stage to study on the relationship between space and concept, students will let themselves become more efficiently towards the aims of design they want to produced off.. Study on space, movement and circulation can motivate student to know how important that items when it also related with human needed, behaviour and character. The final goals for students is refer to their final design, we can see thru the space layout wheter relate with the concept or not. From that we can conclude that plan is the main element which most interior designers use to develop space. Therefore, students and educators should have a greater understanding and vocabulary for such an important tool.
